

I have been with XM Radio for 1 and 1/2 years and depend on it as a reliable connection with the world. Where we live, Kingman, AZ, there is very little if any other radio reception due to our location in the desert. Therefore, XM Radio has every right to upgrade it's services for the listening public and it will not significantly harm other broadcasters. XM Radio will only be supplementing other broadcasting, not replacing it. XM Radio will not be taking away the others advertising. If XM Radio can provide traffic and weather to some localities, that would be very good. Thank you.
